

ENERGY MANAGEMENT SYSTEM POLICY

IDEVIT (Ideal Ceramic Sanitary Ware Materials San. and Trade Inc.) as; Within the scope of our sanitary ware and bathroom products production activities, we are committed to continuously improving our energy performance, using energy resources effectively and efficiently, and supporting sustainable growth by taking into account environmental impacts and climate change-related issues.

- To ensure the effective and efficient use of electricity, natural gas, fuel oil, compressed air and other energy resources,
- To comply with applicable legal and other conditions regarding energy efficiency, energy use and energy consumption,
- To ensure that the Energy Management System we have established is integrated into the business processes of our organization, to be maintained and to continuously improve its effectiveness,
- To provide the necessary information, human resources, technology and financial resources for the establishment, review and realization of energy goals and targets,
- To monitor, measure, analyze and evaluate energy performance based on data, taking into account important energy uses, related variables, risks and opportunities,
- To take into account energy performance improvement opportunities in the design of new, modified and refurbished facilities, equipment, systems and processes that affect energy performance,
- To evaluate the energy performance of products, equipment, services and energy supplies that have an impact on energy performance throughout the planned or expected operating life; to support the supply of energy efficient products and services,
- To evaluate renewable energy, efficient energy sources and low-carbon applications where technically and economically feasible,
- To increase the energy awareness, participation and competence of our employees, subcontractors and related parties,
- To assess whether climate change is a relevant issue and to take into account the climate change-related requirements of the relevant parties when determining our organizational context,
- To detect deviations in energy performance in a timely manner and to take the necessary corrective and remedial actions,
- To make continuous improvement a corporate approach by spreading the energy management culture to all our fields of activity.

We are committed.

Vice Chair of the Board
